Introducción

Este es un documento en R Markdown. Permite generar HTML o Word combinando texto y código.

Primeros comandos de R

R es un leguaje muy parecido a matla y trabaja con variables que en general pueden ser matrices.

```
A <- 38
A <- 40
B <- 60
C <- B - A
C
```

```
## [1] 20
```

```
summary(cars)
```

```
##      speed           dist       
##  Min.   : 4.0   Min.   :  2.00  
##  1st Qu.:12.0   1st Qu.: 26.00  
##  Median :15.0   Median : 36.00  
##  Mean   :15.4   Mean   : 42.98  
##  3rd Qu.:19.0   3rd Qu.: 56.00  
##  Max.   :25.0   Max.   :120.00  
```

```
Y <- 40
alpha <- 30
```

Uso de data sets o base de datos internos de R

Usando el comando `data()` en la consola obtenemos distintos datos ya cargados en la base de datos de R, estos datos estan cargados en tablas de las cuales podemos elegir columnas especificas si escribimos el signo `$` despues del comando de informacion especifico que queremos

Gráficos

```
plot(pressure, type = "s",
     main = "Presión del gas ideal",
     ylab = "hPa",
     xlab = "K")
```

Comando plot

Es un comando que sirve para graficar cualquier fuente de datos que le asignemos: Tenemos la posibilidad de asignar nombres a las variables o hacer cambios del grafico, en caso de no saber el comando podemos escribir **?plot** en la consola, a la derecha nos va a abrir una pestaña y ahí tocar Generic X-Y Plotting y ahi nos va a explicar cada comando

Funciones estadísticas

```
z1 <- rnorm(350, 22, 5)
z1
```

```

Ejercicio 1 de algoritmos

Consigna:Las ultimas 3 cifras del DNI son 803, crear una variable que tenga ese numero

```r
DNI <- 803
```

Consigna: Crear un vector del 1 al 803.

```r
secuencia_dni <- 1:803
secuencia_dni
```

```

## [793] 793 794 795 796 797 798 799 800 801 802 803
```

Ejercicio 2

Calcular la suma de todos los valores del vector secuencia_dni usando un `for`:

```
Total <- 0
valor_final <- length(secuencia_dni)

for (i in 1:valor_final) {
  Total <- Total + i
}

Total
```

```
## [1] 322806
```

Ejercicio 3

Repetir el ejercicio anterior pero en Phyton

Ejercicio 4 Secuencia

Generar secuencia de 2 en 2 hasta 100000

```
A <- numeric(50000)

for (i in 1:50000) {
  A[i] <- i * 2
}

head(A)
```

```
## [1]  2  4  6  8 10 12
```

```
tail(A)
```

```
## [1]  99990  99992  99994  99996  99998 100000
```

Secuencia con función de R:

```
B <- seq(2, 100000, by = 2)
```

Comparación de tiempos:

```
system.time({
  A <- numeric(50000)
  for (i in 1:50000) {
    A[i] <- i * 2
  }
})
```

```
##    user  system elapsed
##   0.005   0.000   0.004
```

```
system.time({
  B <- seq(2, 100000, by = 2)
})
```

```
##    user  system elapsed
##   0.001   0.000   0.001
```

Ejercicio 5 Fibonacci

```r
fib <- c(0, 1)

while (tail(fib, 1) < 1e6) {
  fib <- c(fib, fib[length(fib)] + fib[length(fib)-1])
}

fib
```

```
##  [1]       0       1       1       2       3       5       8      13      21
## [10]      34      55      89     144     233     377     610     987    1597
## [19]    2584    4181    6765   10946   17711   28657   46368   75025  121393
## [28]  196418  317811  514229  832040 1346269
```

```r
length(fib)
```

```
## [1] 32
```

Cantidad de iteraciones necesarias:

```r
length(fib)
```

```
## [1] 32
```

Ejercicio 7 Burbuja vs sort

```r
x <- sample(1:20000, 20000)

burbuja <- function(x) {
  n <- length(x)
  for (j in 1:(n-1)) {
    for (i in 1:(n-j)) {
      if (x[i] > x[i+1]) {
        temp <- x[i]
        x[i] <- x[i+1]
        x[i+1] <- temp
      }
    }
  }
  return(x)
}
```

Comparación:

```r
system.time({
  res1 <- burbuja(x)
})
```

```
##    user  system elapsed
##  20.709   0.054  20.878
```

```r
system.time({
  res2 <- sort(x)
})
```

```
##    user  system elapsed
##       0       0       0
```

Ejercicio 8 Penitencia de Newton

Método 1 (for):

```r
n <- 1e6

system.time({
  suma1 <- 0
  for (i in 1:n) {
    suma1 <- suma1 + i
  }
})
```

```
##    user  system elapsed
##   0.017   0.000   0.017
```

Método 2 (fórmula matemática):

```r
system.time({
  suma2 <- n * (n + 1) / 2
})
```

```
##    user  system elapsed
##       0       0       0
```

Comparación:

```r
suma1
```

```
## [1] 500000500000
```

```r
suma2
```

```
## [1] 500000500000
```

Conclusión

El método matemático es muchísimo más eficiente que el uso de bucles.
